

SECTORS WE REPRESENT

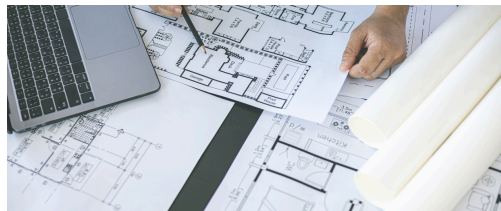

ARCHITECTURE

Architecture is the art and science of designing the built environment, blending creative vision with technical precision to shape the spaces where we live, work, and interact. Beyond traditional building design, the industry offers diverse career paths that span every stage of development, including **civil drafters** who translate complex engineering concepts into precise technical drawings, **landscape architects** who design sustainable outdoor environments, and **architectural or engineering managers** who oversee budget, compliance, and multi-disciplinary teams to bring large-scale structures to life.

DID YOU KNOW?

Hartford, CT is home to "The Boat Building"—the world's first two-sided building! Completed in 1963, its unique curved, ship-like shape shows how Connecticut architects push the boundaries of design to transform our skylines.
